

## PTFE SKIVED TAPE

MFP Seals has the know-how to make the best quality skived PTFE products on the market today. Our skived material can be produced from 0.002" up to 0.250" thick, in widths from 0.5" up to 60", made with the most up-to-date skiving technologies, and premium selection of raw materials. Our skived tapes can also be made to the standards of the Aerospace and Electronics Industries.

Available in T1000 (virgin PTFE), standard PTFE, and filled PTFE compounds, such as, bronze carbon, glass fiber, or other special materials, we have a Skived Tape to fit your application. The special fillers and the technology used to process etch compounded tapes can enhance certain properties, and lower the coefficient of friction, increase hardness, wear strength, and high temperature resistance, increase pressure resistance, and wear resistance (longevity), resulting in lowered operating costs.

## ETCHED & UNETCHED

| T1000 (Virgin PTFE)                    |         |            |                           |                          |  |

MFP Seals produces Skived tapes that are Etched or Unetched. Skived Tapes that have undergone the etching treatment process can adhere to adhesives, allowing them to be bonded to plastic, metal and rubber surfaces. The etching process will turn the treated surface of the PTFE to a Brown or Burgundy color.

Skived Tape is commonly used in, Machines Centers, Drilling Machines, Lathes, Saws, Skids, Milling Machines, Grinding Machines, Bridge Supports, Construction Engineering, and Maintenance Applications.

| PTFE - Skived Tape |           |  |  |  |
|--------------------|-----------|--|--|--|
